

APPENDIX B

Translation of the referenced portion of
CH 2,88 737 (page 2, lines 66-78)

The number of the annular grooves each forming one cutting edges 3 to 9 and the groove pitch 2, the distances from cutting edges to cutting edge and therewith also the cutting groove group 10 comprising the cutting edges 3 to 9 are identical for different classes of cutting rollers. The differences of the cutting rollers is only realised by different arrangements of the cutting groove group 10, in fact in the distances 11 and 12 between the outer cutting edges 3 and 9 and the border of the cutting roller.
